PROJECT DETAILS

PROJECT TITLE: Prevention and detection of denial of service IN MANNET

LANGUAGE OF IMPLEMENTATION - Java

- My project is to detect the DOS attack during the transmission of data. It is to prevent the data from the attack by routing the transmission to next possible path in the cluster of network.
- From this implementation, we can transmit data without any loss in data.
- It also displays the detected attack and plot it at the time of attack.
- We used more than four nodes to test the data transmission by connecting the main server to nodes.
- We used DSA algorithm for encryption and decryption process.
- After the connection with nodes, encryption key will be generated. By using the encryption key data transmitted to nodes by decrypts it.
- It was mainly created for safe and secure transmission between server and nodes. In future we are try to develop this to next level.

KEY LEARNINGS

- I had learned many things about client server connection and also gained java programming knowledge.
